REF: Check for odours in public premises.

We enclose the certificate relating to the research into the presence of oil mist in public premises coming from the use of your machinery in the sale of pre-cooked, frozen chips.

The samples were taken on 09/06/97 at about two metres from the machine in question and lasted one hour, during which time 15 cooking cycles, of about 100 seconds each, took place.

The research into oil mist, which could indicate undesirable odours, was negative.

Yours sincerely,

Director of the Technical Department
